

CARE FLOW UB 4000

Closed urine drainage system

Capacity: 4000 ml

Product specifications:

- ✓ Can be fixed safely and correctly to many different types of bed frames by means of the twin holder with fixing cord.
- ✓ Bacteria- and fluid-tight venting filters ensure permanent pressure compensation and provide for optimal drainage in the system.
- ✓ Clear graduation markings allow for reliable volume control.
- ✓ A doghouse on the bag ensures safe and hygienic positioning of the drain tap.

Capacity	Tube length	Article number	PZN

Staggered connector

The staggered connector provides a reliable connection with the catheter. A needle-free sampling of urine is possible at any time, due to the needle-free sample port, which prevents needlestick injuries.

Profiled tube

The octagonal inner profile of the feeding tube assures excellent stability, but at the same time it is also flexible. A high lumen guarantees a safe drainage into the drip chamber in any situation.

Drip chamber

An anti-reflux valve divides the drip chamber and reliably prevents a backflow of urine and thereby obviates the risk against an ascending infection.

Drain tap in the doghouse

The special design of the piston in the drain tap ensures safe and easy operation and prevents leakages caused by improper use of the piston.

Packaging Unit: 20 pieces

Packaging: sterile
